Islamabad, Pakistan | +92 305 1999984 | haziqahmed31971@gmail.com | linkedin.com/in/haziqbaig31 | haziqbaig.github.io/portfolio

PROFESSIONAL SUMMARY

Software QA Engineer with 2+ years of experience delivering end-to-end quality assurance across web, mobile, and blockchain platforms. Proven track record of independently owning the full STLC — from test planning and execution to defect management and release sign-off — across 8+ live products in the Web3, DeFi, and AI sectors. Experienced in API testing, performance testing, and cross-platform validation, with a dual background in project management enabling close collaboration with developers, designers, and stakeholders to ship secure, high-quality software on schedule.

WORK EXPERIENCE

Software QA Engineer

Quecko Inc.

Aug 2024 – Present

Islamabad, Pakistan

JONI — Personal AI Computer (Web & Mobile) — AI platform with agent marketplace, multi-chain payments, and enterprise dashboard

- Served as QA Lead across 10+ feature modules on web and mobile, authoring test plans and test cases in TestRail covering functional, regression, smoke, UI/UX, and security testing.
- Validated multi-step authentication flows (email, Apple, Google, OTP, password reset) and a multi-chain payment system (ETH, Solana, Tether, card) end-to-end via Postman and manual testing.
- Tested AI agent marketplace flows (hire/subscribe, ratings, reviews) and real-time multi-agent chat orchestration; verified enterprise dashboard covering team invitations, credit allocation, and billing.
- Ensured design fidelity across 50+ screens by cross-referencing Figma prototypes against live builds, reporting UI inconsistencies in Jira with annotated screenshots.

Gems Trade — Centralized Crypto Exchange (Web & Mobile) — full-featured CEX with spot trading, wallet, and launchpad

- Designed and executed a comprehensive test strategy across all platform modules on web and mobile, maintaining test cases in TestRail and defects in Jira.
- Validated real-time market data accuracy (live price feeds, 24H change, volume, market cap, BTC dominance, ETH gas fees, Fear & Greed index) and financial data integrity across trading pairs.
- Tested limit/market order placement, order book rendering, PnL calculations, and multi-step wallet security flows (deposit, withdrawal, bulk sell-all confirmations) to prevent unauthorized fund movements.
- Verified full feature parity and UI consistency between web and mobile across 100+ screens.

Flash Wallet — Lightweight Crypto Wallet (Mobile) — fast, secure send/receive and multi-asset balance management

- Owned the full QA lifecycle independently — authored the test plan and complete test suite in TestRail covering functional, regression, smoke, UI/UX, and security testing.
- Validated all wallet API endpoints via Postman (send/receive, balance fetch, authentication), verifying correct responses and zero data leakage.
- Applied security-first testing to all fund-movement flows, covering edge cases including insufficient balance, invalid destination addresses, and network failures.

Tasks Platform — Decentralized Task Marketplace (Web3) — on-chain task creation and crypto reward disbursement

- Served as both Project Manager and QA Lead; translated client requirements into a sprint roadmap in Jira and drove the full STLC from planning to production sign-off.
- Authored TestRail suites across task creation, listing, submission, and on-chain reward flows; validated RESTful APIs via Postman including authentication headers and error handling.

Tomi — Web3 Super App — *secure messaging, crypto transactions, AI Wallet, and decentralized identity*

- Executed end-to-end functional, regression, and UI/UX testing across the Super App and AI Wallet, covering crypto transactions, voice commands, and decentralized storage.
- Conducted API testing via Postman for wallet transactions, identity management, and messaging integrations; ran smoke/sanity testing after every sprint release with defects triaged in Jira.

Gems Rocks — Memecoin Launchpad (Web3) — *fair-launch platform modeled on bonding-curve mechanics*

- Built and executed a full TestRail suite covering token creation, bonding curve mechanics, first-trade execution, and wallet integration.
- Conducted performance and load testing simulating high-traffic coin launches, identifying bottlenecks and validating stability under concurrent user load.

DOP — Data Ownership Protocol Oracles (Blockchain) — *privacy-preserving oracle system bridging off-chain data on-chain*

- Managed end-to-end QA with structured TestRail suites for data-feed accuracy, staking logic, and dispute resolution; tested oracle ingestion APIs via Postman verifying on-chain data integrity.
- Executed regression cycles after each protocol update to confirm changes did not break existing staking or dispute logic.

Gems.vip — Startup Launchpad — *curated private-sale platform for crypto and tech projects*

- Executed regression and smoke suites during each feature rollout; tested project listing and private-sale participation flows, validating allocation logic, KYC gating, and contribution tracking.

Shopify Developer & QA Intern

Dec 2023 – Feb 2024

OptiExperts

New City, Pakistan

- Developed and integrated AddToCart functionality using JavaScript, improving user engagement and transaction efficiency on client Shopify stores.
- Conducted functional and UI testing using Chrome DevTools to ensure cross-browser compatibility and bug-free feature deployments.
- Optimized front-end performance through script refactoring and resource minification, improving Core Web Vitals scores; collaborated in Agile sprints using Jira.

SKILLS

QA Methodologies: STLC, SDLC, Agile/Scrum, Test Planning, Test Case Design, Bug Reporting

Testing Types: Functional, Regression, Smoke/Sanity, Performance/Load, UI/UX, API, Security

Testing Tools: Postman, TestRail, Jira, Trello, Asana, Chrome DevTools, Remix (Smart Contracts)

API Testing: RESTful APIs, Request/Response Validation, Authentication Testing, Error Handling

Blockchain/Web3: Smart Contract Testing, On-chain Flow Validation, Wallet & DeFi Platform QA

AI Tools: Claude, Gemini, Cursor (AI-assisted test planning, debugging & workflow automation)

Programming & Data: JavaScript, React, C# (project-level), SQL (data validation, joins, select queries)

Soft Skills: Attention to Detail, Clear Communication, Cross-functional Collaboration, Fast Learner

EDUCATION

Bachelor of Computer Science

2019 – 2023

University of Engineering and Technology, Taxila — CGPA: 3.34 / 4.00

CERTIFICATIONS

- C# for .NET Developers — Coursera
- Programming with JavaScript — Coursera
- Introduction to Front-End Development — Coursera
